

JEROME MINKOFF, MD

ENDOCRINOLOGY, SANTA ROSA

2009 Morris F. Collen, MD RESEARCH AWARD

All great researchers have a generous dose of curiosity and no one is more curious than Jerome Minkoff, MD, a respected researcher and a champion for research efforts throughout Kaiser Permanente.

Dr. Minkoff's curiosity sparked his involvement in many important studies including the long-term health consequences of childhood abuse and trauma. He has been involved in research and clinical guidelines development for both osteoporosis and diabetes. He participated in Phase 3 clinical trials that led to the approval of zoledronic acid, the first intravenous treatment for osteoporosis.

Dr. Minkoff is a strong proponent of collaboration between the Division of Research and clinicians. He has been instrumental in connecting clinicians with researchers to help design studies and secure funding.
